Advanced Algorithm - exercise 1 LP

Last date to submit: 16/6/2024

- Simplex Method

- 1. Solve the following LP problems using simplex method:
- a) $Max 3x_1 + 4x_2$

Constraints:

$$15X_1 + 10X_2 \le 300$$
$$2.5X_1 + 5X_2 \le 110$$
$$X_1 \ge 0, X_2 \ge 0$$

b) $Min 3X_1 + X_2$

Constraints:

$$X_1+X_2 \le 5$$

 $2X_1+X_2 > 8$
 $X_1 \ge 0, X_2 \ge 0$

- Duality

2. Consider the linear programming problem:

Constraints:

- a) Use the simplex method to show that the problem is unbounded.
- b) making a picture of of the feasible region of the dual problem
 - 3. Construct (that is, find coefficients) a linear programming problem with two variables and two constraints, for which both the primal and the dual problem has no feasible solution.

- IP

- כתוב IP עבור בעיית ה-3D Matching המוגדרת להלן q איברים כל אחת. $M \subseteq W \times X \times Y$ תהי $M \subseteq W \times X \times Y$

אין איבר משותף M'⊆ M בעלת בעלת q איברים בעלת מבעלת M'⊆ M איברים מ-M'⊆ בשום קואורדינטה.
